

MFA is so 80s

Get Invisible MFA Passwordless Continuous Authentication

Reminiscing about the '80's is fun. But using traditional MFA methods that harken back to yesteryear - not so fun. Combat traditional MFA challenges with a new approach.

Exceed Cyber Requirements

Exceed cyber insurance & ZTA requirements with risk-based continuous authentication

Strengthen Security

Secure all identities across all systems via Device Trust

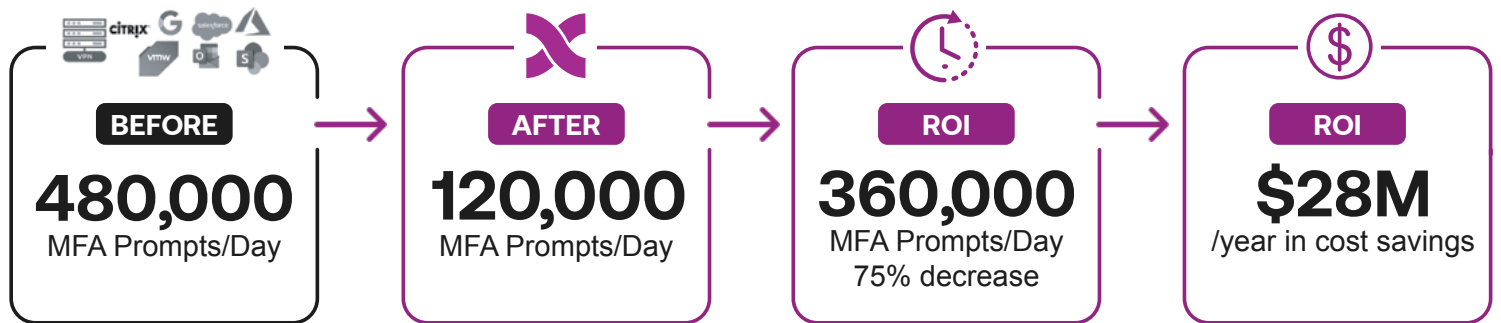

Delight End Users

Reduce MFA prompts for an improved digital experience

Invisible MFA ROI: The Benefit Trifecta

Using invisible MFA provides a benefit trifecta. It delights users with fewer prompts throughout the digital experience, which also results in massive cost savings. Fewer prompts yield fewer MFA bombing attacks, significantly improving security.

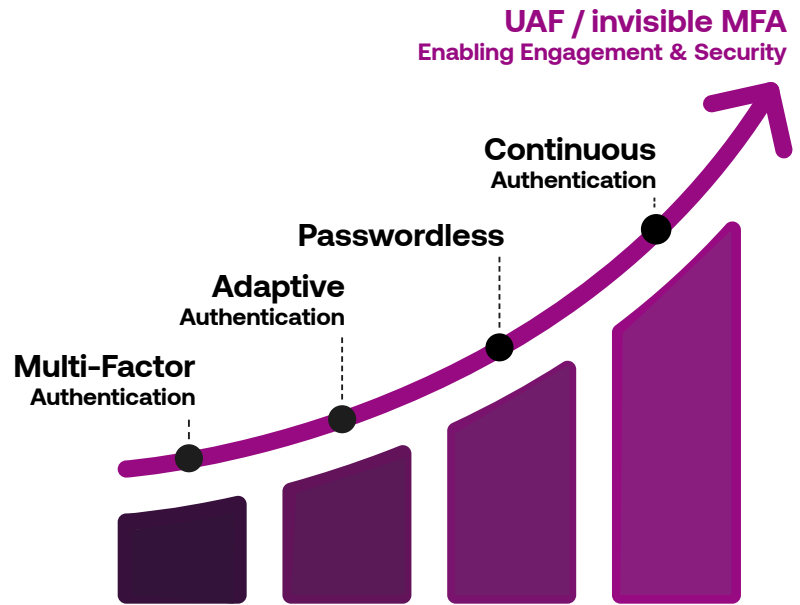

Assumptions

- Average workforce person logs in ~16X/day. Invisible MFA reduces that number to 4.
- With a 30,000-person workforce, the number of MFA prompts is reduced to 120,000.
- Each prompt takes 30 seconds. Employee working 260 days, \$36/hour. Savings = \$28M/year.

Arculix Advances You on the IAM Maturity Curve

No matter where you are on the authentication maturity curve, we support your IAM initiatives.
